

Name that dinosaur: heads

Horns, frills, crests and one very hard head. Look at the head, read the clue, shout the name!

Triceratops ☆ In Dinosaurs Are Back

Say it: try-SERR-a-tops Means: three-horned face

Look for: Three horns: one on its nose, two above its eyes. And a big frill behind them.

Triceratops had a nose horn so sharp, it could probably cut through wood, and a head the size of a small car!

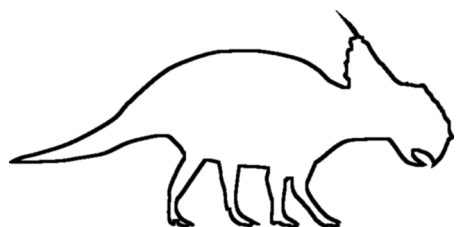

Styracosaurus

Say it: sty-RAK-oh-sore-us Means: spiked lizard

Look for: One long horn on its nose, and long spikes all around its frill.

Some had six spikes on the frill, and some had eight.

Pachyrhinosaurus

Say it: pack-ee-RINE-oh-sore-us Means: thick-nosed lizard

Look for: No nose horn at all! A big, flat, bony bump instead.

The bump is called a boss.

Carnotaurus ☆ In Dinosaurs Are Back

Say it: kar-noh-TORE-us Means: meat-eating bull

Look for: Two short horns above its eyes, like a bull. And very tiny arms.

Carnotaurus was a fast, meat-eating dinosaur with remarkably short arms.

The bone heads, like Pachycephalosaurus

Say it: pack-ee-KEF-ah-lo-SORE-us Means: thick-headed lizard

Look for: A round, bony dome on top of its head. It walked on two legs.

Some scientists think it butted heads, the way rams do. (The outline is its cousin Prenocephale.)

Dilophosaurus ☆ In Dinosaurs Are Back

Say it: die-LOAF-oh-SORE-us Means: two-crested lizard

Look for: Two thin crests on top of its head, side by side.

It was the first meat-eating dinosaur ever found with crests.

Name that dinosaur: backs and tails

Plates, spikes, armor, clubs and a sail. Look at the back and the tail, read the clue, shout the name!

Stegosaurus ☆ In Dinosaurs Are Back

Say it: STEG-oh-SORE-us Means: roof lizard

Look for: Big plates standing up along its back, and four spikes on its tail.

Its plates and tail were strong weapons that helped protect it from predators.

Kentrosaurus

Say it: ken-TROH-sore-us Means: spiky lizard

Look for: Small plates at the front, then long spikes all the way down its tail.

It lived in Africa, in the land that is now Tanzania.

Ankylosaurus ☆ In Dinosaurs Are Back

Say it: an-KYE-low-SORE-us Means: fused lizard

Look for: Bony armor all over its back, and a heavy club at the end of its tail.

But its secret weapon was its tail club, which made it even more powerful!

Euoplocephalus

Say it: you-OH-plo-kef-ah-luss Means: well-armored head

Look for: Armor, spikes and a tail club, like its bigger cousin Ankylosaurus.

Its tail club was made of bone.

Polacanthus

Say it: pol-a-KAN-thus Means: many spines

Look for: Armor and spikes, but NO club on its tail.

It lived in England.

Spinosaurus ☆ In Dinosaurs Are Back

Say it: SPINE-oh-SORE-us Means: spine lizard

Look for: A tall sail on its back, and a long snout like a crocodile's.

Spinosaurus was even bigger than Tyrannosaurus rex!
