

Plant-eater or meat-eater?

Cut out the ten dinosaurs on the next page. Then put each one where it belongs.

Plants

plant-eaters are called herbivores

Meat

meat-eaters are called carnivores

Stuck? Look at the teeth. Sharp, pointed teeth are for meat. Flat teeth or a beak are for plants.

The answers

Plant-eater or meat-eater?

Plants (5)

Stegosaurus: it ate ferns and other tough plants.

Triceratops: it snipped plants with a sharp beak.

Brachiosaurus: it could eat 100 to 400 kilograms (220 to 881 pounds) of plants every day!

Apatosaurus: a giant long neck. All the long necks ate plants.

Ankylosaurus: it ate ferns, shrubs and fruit.

Meat (5)

T. rex: it could eat up to 230 kilograms (507 pounds) of meat and bones in one bite!

Spinosaurus: mostly fish.

Velociraptor: small animals, like lizards.

Dilophosaurus: Its jaws suggest it probably ate fish, but it was still a carnivore.

Carnotaurus: capable of swallowing its prey in a single gulp!

Most kinds of dinosaur ate plants. Meat-eaters were the few!
