

Dragon race: a multiplication board game

A board game for two to four players. You need two dice and a counter for each player: a coin, a button, a dried bean.

- 1 Put your counters on START. The youngest player goes first.
- 2 On your turn roll both dice. Multiply the two numbers and say the answer out loud.
- 3 Right? Move forward by ONE of your two dice. You choose which. Wrong? Stay where you are.
- 4 If your square says go forward or go back, do it. The first player to reach FINISH wins. You don't need the exact number.

Two dice only reach 6 times 6. For bigger sums, add 6 to one of the dice before you multiply.
