

Four in a row: a multiplication dice game

A game for two players. You need two dice and counters in two colors: buttons, coins or dried beans, about ten each.

- 1 Take turns. On your turn roll both dice.
- 2 One die picks the row and the other picks the column. You choose which is which.
- 3 Say the answer in the square where they meet, then cover that square with one of your counters. Is it taken? Try the dice the other way round. Both taken? You miss this turn.
- 4 Four of your counters in a row wins: across, down or corner to corner.

x	1	2	3	4	5	6
1	1	2	3	4	5	6
2	2	4	6	8	10	12
3	3	6	9	12	15	18
4	4	8	12	16	20	24
5	5	10	15	20	25	30
6	6	12	18	24	30	36
